SCENARIO3/FILE3:

“This query is to find the customer details, staff details, and package related information of MyWay sdn.bhd. The nine tables include **Person, Customer, Staff, Package, Visa, Place, Discount, Payment, and Receipt**. The attributes extracted from each table are **person first name, customer office number, staff office number, package price, visa rate, place fee, discount type, total amount of payment, and discounted amount in receipt**. These can be identified using person ID, customer ID, staff ID, discount ID, package ID, and country telco ID.

Constraints are also set to allow the table to display only the data that satisfy the condition of **successful receipt payment, payment made with CIMB Bank, package pax of at least 1 pax, and customer income of at least RM1800**. The purpose of these attributes being displayed is to ease the company management in identifying and analysing the customers buying behavior, in parallel with monitoring the settled customers receipt.”
